DETAILED ACTION

Response to Amendment

1. Amendments to claim 1 have been entered in the above-identified application.

Claim 2 has been cancelled. New claims 6 and 7 have been added. The new Abstract has also been entered.

Claims 1 and 3-7 are now pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Goto et al. (US 6,042,894).

Goto et al. disclose an anisotropically electroconductive resin film having electroconductivity in the thickness direction alone via the electroconductive particles dispersed in the film (Column 1, lines 8-12). The film is produced by sticking electroconductive particles to a sticking layer and filling a film forming resin, which is incompatible with the sticking material among the electroconductive particles (Column 5, lines 8-18). The film forming resin is an insulating adhesive and the electroconductive

Art Unit: 1773

particles are buried in the sticking layer to a depth of half or less of the particle size of the electroconductive particles (Column 6, lines 10-11 and 35-39). The electroconductive particles are dispersed with different concentration in the film thickness direction (Column 6, lines 59-61). All limitations of claims 6 and 7 are disclosed in the above reference.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1 and 3-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamazaki (US 4,696,764).

Yamazaki discloses an anisotropically conductive composition, which provides electric conductivity between facing electrodes but maintains electric insulation in the lateral direction across the facing direction (Column 1, lines 5-10). The composition comprises (a) a nonconductive base resin and (b) electrically conductive particles incorporated and dispersed in the resin (Column 1, lines 24-27). Example 1 states that the anisotropically conductive composition is printed on a terminal to have a thickness of 30 micrometers and contains particles having a diameter of 0.5 micrometers (hence meeting the limitation that the particle diameter of the electrically conductive particles is smaller than ½ of the thickness of the first adhesive layer). With regards to the limitation that the first adhesive layer and second adhesive layer are

Art Unit: 1773

formed of the same material, the Examiner takes the position that such a limitation simply implies that the anisotropic material of the claimed invention is simply an adhesive layer containing electrically conductive particles and the product of the claimed invention is the same as that disclosed in the above reference.

Response to Arguments

4. Applicant's arguments with respect to claims 1 and 3-5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheeba Ahmed whose telephone number is (571)272-1504. The examiner can normally be reached on Mondays and Thursdays from 8am to 6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Thibodeau can be reached on (571)272-1516. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
